

## 5G Early Access Program

Be ahead of your competition

5G is the ultrafast wireless network which has the potential to connect everything and usher in the next great technology revolution. To enable developers, startups, corporates and hyperscalers to test our 5G APIs directly on a fully functional 5G standalone core network, Deutsche Telekom built a unique indoor and outdoor testbed at hubraum in Berlin.

Validate the impact of our 5G APIs on your own APIs and apps in our testbed. Get a head start into new business opportunities by learning early how your products can utilize 5G functionalities. Tap directly into one of the world's leading integrated telecommunications networks to reach customers with speed, confidence and security.

### WE ARE LOOKING FOR YOU!

Specific areas of interest we are looking for include moving objects, such as cars, drones, or automated guided vehicles; production topics such as smart factory or automatic production lines; entertainment projects such as gaming or metaverse; and other topics such as security or agriculture.

### WHAT YOU GET

- Unparalleled indoor and outdoor 5G testbed at hubraum in Berlin
- Test the first of our 5G APIs in a fully functional 5G network
- Configure key functions of 5G networks such as bandwidth and latency
- Learn how your products work with 5G and leapfrog your competition

Huge opportunity to work with one of the world's leading integrated telecommunications companies

Apply now to join our 5G Early Access Program at hubraum in Berlin:
